Physicians should not prescribe, and individuals should not take, chloroquine or hydroxychloroquine to prevent or treat COVID-19 except under clinical trial or monitored emergency use of unregistered and investigational interventions (MEURI). These drugs can cause neurologic, ophthalmic, cardiac, and other forms of toxicity.

Physicians should not prescribe, and individuals should not take, Lopinavir/Ritonavir, Remdesivir or other medications to prevent or treat COVID-19 except under clinical trial or MEURI.

Paracetamol, acetaminophen, or ibuprofen may be used to relieve symptoms of fever and/or myalgia due to viral infection.

Africa CDC will continuously update its guidance based on the latest available evidence.
