1. Ebola virus disease outbreak overview

![Epidemic curve for confirmed and probable cases by date of onset]

- **Total new confirmed cases this week**: 11
- **Total cases this week**: 3327
- **Total dead**: 2209
- **Total recovered**: 1087
- **67% case fatality**

2. Epidemiological Week 49 (2-8 December 2019)

- **Epi week 49 (2-8 December 2019)**

1. **Confirmed EVD case in Ariwara, DRC (near Uganda and South Sudan borders)**
2. **One confirmed case in Goma, DRC**
3. **Confirmed EVD case in Kasese District, Uganda**
4. **Confirmed EVD case in Ariaa, DRC (near Uganda and South Sudan borders)**
5. **Fourth meeting of IHR Emergency Committee: EVD outbreak declared PHEIC**
6. **New vaccination recommendations issued by SAGE**
7. **New confirmed cases**
8. **New confirmed deaths**
9. **New recovered**

---

IHR = International Health Regulations; SAGE = Strategic Advisory Group of Experts; PHEIC = Public Health Emergency of International Concern.

Data provided by the DRC Ministry of Public Health
3. Affected areas

- South Sudan
- Democratic Republic of Congo
- Uganda
- Rwanda
- Burundi
- South Kivu
- North Kivu
- Ituri

4. Africa CDC response activities this week

- The Regional Collaborating Centres continued to support preparedness in Member States, including sharing information and discussing preparedness plans during the weekly ECHO sessions.
- Africa CDC volunteers and experts supported tracing of 831 contacts and investigation of 1678 alerts, including active case-finding for 353 suspected cases.
- Africa CDC teams made 39 visits to health care facilities and trained 54 health care workers in infection prevention and risk communication. They evaluated 16 health care facilities and accompanied 65 health care workers to ensure compliance with infection prevention measures.
- Africa CDC-supported laboratories in Butembo, Bunia, Komanda, Bukavu, Mambasa, and Goma received and tested 1692 samples.
- Response activities remained suspended during the week in Beni.
- The African Union hosted the Africa Against Ebola Forum on Monday, 2 December 2019, to raise funds for the Ebola outbreak response. Pledges were obtained from some participating agencies and partners.

5. Update from Member States

Seventeen African countries participate in public health emergency simulation exercise

Seventeen African countries participated in a simulation exercise on 4 and 5 December 2019, which tested the capacity and readiness of their public health emergency operations centres (PHEOCs) to respond promptly and effectively to a sudden disease outbreak. The participating countries included Burundi, Cameroon, Côte d’Ivoire, Ethiopia, Gambia, Guinea, Kenya, Liberia, Nigeria, Senegal, Sierra Leone, South Sudan, Tanzania, Togo, Uganda, Zambia, and Zimbabwe.

The exercise was jointly organized by Africa CDC, WHO Africa Regional Office, West Africa Health Organization, and US CDC. It was coordinated by WHO from its regional headquarters in Brazzaville.

The exercise consisted of a fictitious outbreak of a deadly communicable disease in a supposed African country, which required an emergency response, including activation of the PHEOCs.

Although there was no actual deployment of human, financial and material resources, the participating countries designed and carried out a pseudo-implementation of a rapid response strategy for the outbreak using the available tools and technologies.

Africa CDC used the exercise as an opportunity to test the connection between its EOC and those of the participating countries, and to identify gaps in emergency response within the continent.

Following the exercise, there was a debriefing session to evaluate and discuss the readiness and capabilities of each country’s PHEOC. Areas of focus for the evaluation included the existence of a legal authority to operate the PHEOC, familiarity with and ability of PHEOC staff to use the available technologies, linkages between the PHEOCs and the national emergency management authorities, and communication and information-sharing between the PHEOCs.

Each country is expected to take actions targeted at address areas of weakness in their response capabilities with support from Africa CDC and the other partners.
