

Outbreak Brief #22: Mpox in African Union Member States

Date of Issue: 13 December 2022

1,111 confirmed cases, 209 deaths in AU MS

Data sources: US CDC, WHO, and AU Member State Ministries of Health

Global Update (non-endemic countries)¹: As of 12 Dec 2022, 82,610 confirmed cases of mpox and 259 deaths were reported from 110 countries/territories globally. The countries reporting the majority of cases are mainly in Europe and the Americas.²

Africa update (endemic³ and non-endemic countries): Since the beginning of 2022, the continent has reported 1,111 confirmed cases and 209 deaths (CFR: 18.8%) of mpox from eight endemic Africa Union (AU) Member States (MS): Benin (3 confirmed cases; 0 confirmed deaths), Cameroon (18; 3), CAR (8; 2), Congo (5; 3), Democratic Republic of Congo (DRC) (277; 188), Ghana (107; 4), Liberia (3; 0), Nigeria (659; 7) and five non-endemic MS: Egypt (4; 0), Morocco (3; 0), Mozambique (1; 1), South Africa (5; 0) and Sudan (18; 1). This week, 22 new confirmed cases and 7 new deaths were reported from DRC (20 cases; 7 deaths) and Egypt (2; 0).

DRC: Since the last update (29 November 2022), the MoH reported 20 new confirmed cases and seven deaths (CFR: 35%) of mpox. This is a 61% decrease in the number of new confirmed cases and a 75% increase in the number of new deaths compared to last Update. Cumulatively, 277 confirmed cases and 188 deaths (CFR: 68%) were reported from 23 provinces. Three provinces reported the most cases: Equateur (32 confirmed cases), Tshopo (38) and Tshuapa (136).

Egypt: Since the last update (30 September 2022), the MoH reported two new confirmed cases of mpox. This is a 100% increase in the number of new cases compared to the last update. One of the new cases is a 39-year-old male with no history of travel abroad. The second new confirmed case is a contact to a previously confirmed case. Cumulatively, four confirmed cases and no deaths of mpox were reported.

¹ Global case and death numbers are inclusive of numbers being reported in Africa.

³ Cameroon, the Central African Republic, the Democratic Republic of the Congo, Gabon, Ghana, Côte d'Ivoire, Liberia, Nigeria, the Republic of the Congo, and Sierra Leone

Figure 1. New confirmed mpox cases reported by epidemiological week in AU MS since January 2022⁴

The majority of AU MS reporting cases are from the central and western Africa regions with DRC, Ghana and Nigeria accounting for 94% of all confirmed cases reported (Table 1). Most cases were reported after the week of 21 July and this could be a result of enhanced surveillance in MS (Figure 1).

⁴ The high numbers of confirmed cases reported from DRC in week 15 July is likely the result of batch reporting.

Table 1. Cumulative confirmed mpox cases and deaths reported from African Union Member States in 2022 - as of 12 December 2022.

Country	Total confirmed cases (new)	Total confirmed deaths (new)	CFR ⁵
Benin	3 (0)	0 (0)	0%
Cameroon	18 (0)	3 (0)	17%
Central African Republic	8 (0)	2 (0)	25%
Congo Republic	5 (0)	3 (0)	60%
Democratic Republic of Congo	277 (20)	188 ⁶ (7)	68%
Ghana	107 (0)	4 (0)	4%
Egypt	4 (2)	0 (0)	0%
Liberia	3 (0)	0 (0)	0%
Morocco	3 (0)	0 (0)	0%
Mozambique	1 (0)	1 (0)	100%
Nigeria	659 (0)	7 (0)	1%
Sudan	18 (0)	1 (0)	6%
South Africa	5 (0)	0 (0)	0%
TOTAL	1,111 (22)	209 (7)	19%

⁵ Case fatality ratio is the proportion of confirmed deaths over confirmed cases.

⁶ Africa CDC cannot ascertain that all deaths reported from DRC are laboratory confirmed. Africa CDC is working with the DRC to clarify this data.

Event Geoscope and Risk Assessment Levels

Geoscope level: High

Risk level: Moderate

Africa Centres for Disease Control and Prevention (Africa CDC) conducted a preliminary assessment of the geographic scope (geoscope) and risk level for the mpox events being reported for Africa and globally. Given that this outbreak is currently affecting multiple countries both on and outside of the continent, the geoscope assessment is high. If additional

AU MS report disease linked to this outbreak, we will reassess and elevate accordingly. For the risk assessment level, we looked at the following criteria: morbidity and mortality of the disease, probability to spread within and to other AU MS, and the availability of effective treatments, vaccines, or other control measures. We have listed the risk level as moderate given that mpox is not an easily transmissible, self-limiting disease with low mortality, which lacks effective treatment for those infected. We are closely monitoring the situation and we will reevaluate the risk periodically.

Member State Response Activities

Egypt: The MoH continues to conduct enhanced surveillance and vaccination among health workers and contacts of confirmed cases.

DRC: The MoH continues to conduct enhanced surveillance for mpox.

New Africa CDC Response Activities

- On 8 August 2022, the Africa CDC Emergency Operations Centre (EOC) was activated to support preparedness and response efforts of African Union Member States, in close collaboration with relevant partners
- The Africa CDC continues to provide support to AU MS with laboratory test kits on request.
- The Africa CDC continues to engage with Ministries of Health in Member States reporting cases to provide support as requested
- Africa CDC engaged the government of the Republic of Korea, through Korea Disease Control and Prevention Agency (KDCA) to ensure access to mpox vaccines. A commitment to donate 50,000 doses was made during the 7th Global Health Security Agenda meeting held in the Republic of Korea in Seoul from 28-30 November 2022⁷.

Recommendations for AU Member States

Member States are advised to:

- Establish laboratory diagnostic and genomic sequencing capacity for orthopoxviruses, including mpox.
- Establish and/or strengthen existing mpox surveillance efforts.
- Develop and distribute both general and tailored risk communication messages for the community at large as well as specific populations currently impacted and at risk (e.g., sex-workers, immunocompromised individuals, children).

⁷ [The Republic of Korea to Donate First Batch of Mpox Vaccine to Africa](#)

- Strengthen knowledge of mpox clinical management and infection prevention control measures.
- Report new cases of mpox as part of the current multi-country outbreak to Africa CDC (AfricaCDCEBS@Africa-Union.org)
- Member States that need support from Africa CDC should submit requests for support to the Director Africa CDC (AfricaCDCEBS@Africa-Union.org)

The general public is advised to:

- Seek medical attention if you experience any mpox-like symptoms (e.g., develop rash with or without prior symptoms of fever, swollen lymph nodes, body aches, and weakness), especially if you have been in contact with a positive case
- Practice effective hand hygiene by washing hands with soap and water or using an alcohol-based hand sanitizer, especially after contact with any infected animal or human
- Avoid contact with animals that could harbor the virus, including animals that are sick or found dead in areas where mpox occurs
- Avoid contact with any potentially contaminated material, such as clothes and bedding, with which animals with mpox have been in contact with
- If deemed a close contact of a mpox case, individuals should self-monitor for the development of symptoms up to 21 days from the last exposure to a case
- If you are infected with mpox, adhere to recommended isolation protocols prescribed by your medical provider to minimize transmission to others, including pets and other animals that may be susceptible to mpox infection
